MASTER'S REMARKS 船長備註

Vessel proceeding as per voyage plan, no incidents to report. Noted slight increase in M/E exhaust gas temp on Unit No.3, monitoring closely, will advise if trend continues. Observed minor vibration amidships during full ahead manoeuvring this morning, suspect propeller fouling as last hull cleaning was over 7 months ago (ref. last UWI Singapore, Jun 2024). Speed has been gradually decreasing past 2 weeks despite consistent RPM setting - recommend technical dept review for next docking schedule. Weather moderate, following sea, no weather routing deviation required. Fresh water and provisions sufficient until next port. All safety equipment checked and in order.

This report is auto-transmitted via vessel satellite communication system. Format may vary by master/vessel — fields are not always consistently filled or labeled.
